Perennials Fabrics G&P

PERENNIALS OUTDOOR FABRICS INTRODUCES THE GALBRAITH & PAUL COLLECTION

Perennials Outdoor Fabrics introduces the Galbraith & Paul Collection of outdoor fabrics, a collection of patterns created by adapting the handcrafted qualities of Galbraith & Paul's designs. The results are a contemporary, youthful, yet elegant collection of striking

patterns offered in a varied palette of natural colours.

The Galbraith & Paul Collection from Perennials conveys a playful modern take on organic forms and patterns. You see this in Vines and Bird Tracks, two loose, light, and airy patterns that remind one of simple potato prints. In contrast, Sunflower is a design that is

Harlequin

weighted with detail. Sunflower is big and bold and not to be ignored.

Contemplative graphic circles are featured in a playful print named Bubbles, an abstract pattern of interconnected rings. With Ripples, an array of casual stripes transforms beautiful imperfections into a perfect coordinate. Both Bubbles and Ripples liberate the strict elements of modern design in such a way as to compel one to think freely again.

Barnacle and Sea Palms are two woven interpretations of Galbraith & Paul's block printed designs. Barnacle is an adaptation from the Arts and Crafts movement that has its roots in 19th Century England, while Sea Palms creates the illusion of tactile shadows of palms on the sand reminiscent of the 1950's but with a modern twist. To round out the collection are two solid textiles, Ishi and Sail Cloth that complement and ground the wonderful geometric designs of this natural collection.

The organic elements of this collection come to life in 26 pigmented colours that are drawn from nature. Neutrals of Dune, Dove, Vellum, and Graphite add a calmness to the

vibrant colours of the earth's rainbow—Geranium Red, Fire Island, Key Lime and Citrus, and to the moody water colours of Cape Cod, Ocean, Nantucket and Monterey Bay.

Perennials Outdoor Fabrics is guaranteed to be soil-, mildew- and UV resistant, so there is never a need to sacrifice style for durability. Even tough stains like red wine and suntan oil can be removed easily with soap and water. Perennials Outdoor Fabrics is available to interior designers and architects through fine showrooms worldwide.

AGUA FABRICS ADDS TO ITS COLLECTION

Agua Fabrics has just introduced two further ranges within the brand. Named Agua Aura and Agua Eclipse, both have been developed and designed to meet the demand in the hotel and leisure sector worldwide for an exceptional textile for inside and outdoor use.

Agua Aura is colour fast to sunlight, resistant to chlorine and seawater, waterproof, fire retardant and machine washable. It is highly stain resistant and is easily wiped clean. It will not mould or mildew, nor will it crack or peel over time and it does not become dangerously hot in high temperatures.

The new fabric comes in a wide range of colours from primary colours to muted shades. Altogether, there are 10 plains and four each of a stripe and a check. In addition, Agua Fabrics can manufacture bespoke designs, introducing, for example, the customer's monogram or brand logo.

Agua Eclipse has been developed specifically for parasols, canopies and awnings to provide a UV Sunblock Factor 50+ combined with all the other high performance features of Agua Aura in a highly attractive fabric.

Suzanne Ralton, Managing Director of Agua Fabrics, says: "With the growth in luxury resort and spa development, we were increasingly being asked by specifiers for a material that had the soft feel of an interior fabric but with the technical properties of an outdoor fabric so that indoor/outdoor areas could be seamlessly created. Agua Aura and Agua Eclipse are the result of several years development in the UK and the Middle East and we are very excited about the potential they have around the world."

Agua Fabrics is currently establishing a base in Dubai to serve the Gulf region, providing local support, a sample service and stock provision. The Company will also be launching further high performance fabrics in the very near future.

Aqua Fabrics

HARLEQUIN HARRIS

Harlequin has launched Mimosa, a vibrant and contemporary collection of floral prints and weaves in evocative colour combinations.

The collection is a modern interpretation of the primitive woodblock-printing techniques of Indochine, from which it draws its inspiration.

A range of layered silk weaves and naïve running stitch embroideries complements the five simple prints. These patterned fabrics are further accessorised by a comprehensive selection of plain silk dupions and sumptuous textures velvets in a selection of colours.

Erwin

The palette spans brights and understated neutrals to create a selection of clean, fresh colours, certain to breathe new life into any interior scheme.

CHASE ERWIN

Confident colours, lustrous weaves and rich textures all contribute to Chase Erwin's unique, sophisticated style of silks.

Founder, Ragna Erwin continues to create stunning designs that complement the existing collections for which Chase Erwin is renowned, capturing the diversity and complexity of light and lustre of silk in clean fresh colours, which is often reflected in her signature metallic hues. Whilst establishing a reputation as a leading specialist in silks, Chase Erwin continues to provide luxurious, contemporary silk fabrics and are ever expanding its sophisticated silk collections.
